

# enVoy EDT

## A real time tool supporting EDT (Electronic Data Transfer) communications with National Grid

**A fully accredited, end to end solution for UK Power Generators to support EDT communications with National Grid**

- ✔ Supports all EDT data flows including Physical Notifications, MELs, Bid Offers, Run Rates and Plant Parameters
- ✔ Fully integrates with enVoy's EDL module
- ✔ A powerful monitoring and alerting solution allowing you to track the status of all submissions and quickly detect errors and communication issues
- ✔ Rich usability features enabling you to quickly validate and post new submissions
- ✔ Comprehensive API allowing submissions to be imported from external optimisation systems
- ✔ Robust audit history of all incoming and outgoing communications
- ✔ Configurable validation rules
- ✔ enVoy can be hosted or deployed

Take advantage of commercial opportunities in the Balancing Mechanism by swiftly managing and amending your Bid Offer Data (BODs) to increase additional revenue.

Maintain an accurate history of all data files sent and received to support efficient reporting.

Configurable and automated system alerts quickly detect issues allowing you to take immediate action where needed.

enVoy EDT and EDL modules have been designed to fully support the upcoming EBS changes being implemented by National Grid in 2017 and 2018
