Our Approach

We Provide

- ✓ An indicative implementation profile with suggested durations and activities for each phase.
- ✓ An indicative resource profile for both Contigo and your business's resources to support each phase.
- ✓ A Contigo project Manager and Business Analyst along with in-house development and testing resource.
- ✓ On completion you will be assigned a permanent Technical Client Manager who provides on going system support.

To ensure a smooth and rapid implementation, we need you to provide the following information:

Availability of key personnel

- Please include constraints including holidays.

Business requirements

- All touch points with enTrader e.g. trade booking, hedging strategy and process, end of day process, settlement etc...

Standing data configuration Items

- A list of counterparties you trade with, including exchanges, brokers etc.
- All your trading, commission or broker contracts - terms of each will be reviewed for input into enTrader.
- Consider the type of Book structure you wish to implement.

Transaction Data Migration

- Consider the data you wish to migrate.
- We can support you to upload this data through enTrader's bulk upload facility.

Your Contigo implementation specialist will run through this during the gap analysis phase.

Following an internal review of your business processes, start to think about the scenarios you will need to test during the User Acceptance Test phase.

Scenarios should reflect the day to day and ad hoc processes that will be managed in enTrader®. These can be used as Acceptance Criteria to complete UAT before going into Production. We will review these with you during implementation.

The enTrader logo, consisting of the word 'enTrader' in a white sans-serif font inside a green circle. The background of the slide features a blurred image of a man in a light blue shirt talking on a mobile phone in an office setting.

“the process to
'go live' stage was
smooth and fast.”

Callum Wright,
Energy Forecasting Manager
Co-op Energy

About Contigo

Contigo provides award winning energy trading and portfolio risk management solutions (ETRM) that simplify energy trading for its customers across Europe.

Contigo was established by industry experts from leading energy trading firms. Its sophisticated software, enTrader and enVoy supports generation, wholesale and retail businesses and manages the full trade lifecycle from deal capture through portfolio and risk management to settlement.

Preconfigured for the European energy market with rapid 'out-of-the-box' functionality, providing instant position to any granularity.

Contigo's powerful modular software suite was designed and built for cloud, reducing CAPEX and providing scalability and flexibility. The cloud offering is single tenanted providing a robust, secure environment which can be upgraded in line with customer schedules. enTrader enables straight through processing from Trayport, European exchanges and venues including direct access to intraday markets.

Contigo is a part of the **energyone** group.
